24               **Facts**

---

28               <sup>1</sup> The National Practitioner Data Bank is a national databank, created by the Health Care Quality  
Improvement Act of 1986, that receives, stores, and disseminates records on the conduct and competence of medical

1 inadequate care to several patients within a 13 month interval. The Board initiated an  
2 investigation of the events underlying this report through the Department of Consumer Affairs,  
3 Division of Investigation (DOI). The DOI investigator interviewed two of Respondent's patients  
4 and Respondent regarding the events which occurred during their treatment.

5 **Patient DD<sup>2</sup>**

6       13. On or about September 13, 2010, Respondent provided acupuncture treatment to DD.  
7 DD stated Respondent failed to explain the treatment to her, and seemed irritated by DD's  
8 questions.

9       14. Respondent told DD her acupuncture treatment session would last for 20 minutes.

10       15. Respondent inserted acupuncture needles into DD's back, arms, legs, and feet while  
11 DD lay on the acupuncture table.

12       16. After inserting the acupuncture needles into DD Respondent left the treatment room  
13 and did not return to check on DD during any portion of her acupuncture treatment. There was no  
14 method for DD to contact Respondent from her treatment room during her treatment such as a  
15 chime, buzzer, or intercom.

16       17. After undergoing approximately 30 minutes of treatment, DD tried unsuccessfully to  
17 get Respondent's attention by screaming Respondent's name for approximately 10 minutes, but  
18 Respondent did not return to the room or communicate with DD in any way.

19       18. After failing to get Respondent's attention DD got off of the acupuncture table with  
20 the acupuncture needles still embedded in her body and walked outside the treatment room to  
21 look for Respondent.

22       19. DD located Respondent in another room, who was on the telephone discussing a  
23 telephone bill.

24       20. Respondent did not apologize to DD for leaving DD alone for over 30 minutes during

26       professionals. The databank stores information relating to medical malpractice payments made on behalf of health  
27 care practitioners; information relating to adverse actions taken against clinical privileges of physicians, osteopaths,  
28 or dentists; and information concerning actions by professional societies that adversely affect membership.

<sup>2</sup> The names of the patients and/or witnesses are abbreviated to protect their privacy rights. The names will  
be provided to Respondent upon written request for discovery.

1 DD's acupuncture treatment.

2       21. Respondent's patient progress notes for DD do not mention that DD unsuccessfully  
3 struggled to get her attention by screaming her name for approximately 10 minutes.

4       22. Respondent's patient progress notes for DD do not mention that DD got off of the  
5 acupuncture table with acupuncture needles still inserted in her body and walked outside the  
6 treatment room to look for Respondent.

7       23. DD told the DOI investigator that although she did not sustain a physical injury, she  
8 believed she endured emotional distress because Respondent left her unattended throughout the  
9 entire treatment session.

10      24. DD told the DOI investigator she believed the behavior that Respondent exhibited  
11 during her treatment session was unprofessional.

12      25. During Respondent's interview with the DOI investigator Respondent admitted that  
13 after inserting the acupuncture needles into DD she did not see DD again until approximately 40  
14 minutes later when she saw DD standing outside of the treatment room with the acupuncture  
15 needles still inserted in her body.

16      26. During Respondent's interview with the DOI investigator Respondent admitted she  
17 was not aware that DD was calling for her for approximately 10 minutes.

18      27. During Respondent's interview with the DOI investigator Respondent said she has  
19 worn a hearing aid for 20 years but is able to hear adequately to respond to patients.

20 **Patient DC**

21      28. On or about September 9, 2011, DC saw Respondent for the first time when she  
22 treated him for knee pain. Respondent provided acupuncture to DC by using both  
23 electrostimulation<sup>3</sup> as well as traditional acupuncture needles in his legs.

24 \_\_\_\_\_  
25 <sup>3</sup> Electrostimulation is defined as a form of acupuncture where a small electric current is passed between  
26 pairs of acupuncture needles. Electroacupuncture is quite similar to traditional acupuncture in that the same points  
27 are stimulated during treatment. As with traditional acupuncture, needles are inserted on specific points along the  
28 body. The needles are then attached to a device that generates continuous electric pulses using small clips. These  
devices are used to adjust the frequency and intensity of the impulse being delivered, depending on the condition  
being treated. Electroacupuncture uses two needles at a time so that the impulses can pass from one needle to the  
other. Several pairs of needles can be stimulated simultaneously, usually for no more than 30 minutes at a time.

1        29. After Respondent connected the electrostimulation machine to DC and inserted the  
2        acupuncture needles into his legs she left the treatment room. There was no method for DC to  
3        contact Respondent from his treatment room during his treatment such as a chime, buzzer, or  
4        intercom.

5        30. Ten minutes after Respondent left the treatment room DC began to feel pain and  
6        repeatedly yelled for Respondent but Respondent did not return to the room or communicate with  
7        DC in any way.

8        31. After Respondent failed to respond to DC's shouts DC disconnected himself from the  
9        electrostimulation machine and removed his acupuncture needles.

10        32. After DC disconnected himself from the electrostimulation machine and removed the  
11        acupuncture needles he walked around Respondent's empty office in an unsuccessful attempt to  
12        locate Respondent. Approximately 15 minutes from the beginning of his treatment DC left a note  
13        containing his copayment for Respondent and exited the office. DC subsequently filed a  
14        complaint about Respondent's behavior during his treatment.

15        33. During Respondent's interview with the DOI investigator Respondent admitted  
16        leaving DC alone in the treatment room during his treatment without checking on him at any  
17        time.

18        **Standard of Care**

19        34. The standard of care requires acupuncturists to exercise watchfulness and care by  
20        regularly checking patients while they are undergoing treatment.

21        35. The standard of care for an acupuncturist who leaves a patient unattended in a  
22        treatment room after insertion of acupuncture needles requires the acupuncturist to provide an  
23        uncomplicated, straightforward method for the patient to contact the acupuncturist during  
24        treatment such as a chime, buzzer, or intercom.

25        36. The standard of care requires the acupuncturist to remove acupuncture needles from  
26        the patient in a timely manner.

27        37. The standard of care requires the acupuncturist to examine a patient who removed  
28        their own acupuncture needles to ensure there are no broken needles lodged below the patient's

skin.

38. The standard of care requires an acupuncturist who uses an electrostimulation device during acupuncture treatment to have control over the voltage level utilized in order to avoid excessive stimulation to the patient.

39. The standard of care requires an acupuncturist who uses an electrostimulation device during acupuncture treatment to carefully monitor the frequency and intensity of the electrical stimulation to the patient throughout the patient's treatment session

40. The standard of care requires an acupuncturist to maintain accurate and complete patient records which contain all significant information for each patient encounter
